D-link offers a Windows executable called "Smart Console Utility" which allows discovery and configuration of the switches in your network. It also discovers the switches if they are not on the same subnet as the computer running the utility and then allows setting the IP, subnet mask and gateway addresses (which in turn allows access to the web GUI).

IP addresses, networks, submasks, and CIDR notation can be difficult concepts to understand. In this guide, we will cover some of the basic ideas behind how these systems work together to allow computers to communicate over the internet.

### **Understanding IP Addresses, Subnets, and CIDR Notation for ...**

IP number. Internet address. Whatever you call it, it's your link to the world. What? You don't know what an IP address is used for? Don't worry. Most of the billions of computer users don't know either, and to tell you the truth, that's perfectly alright.

### **What is an IP Address?**

IP networking. In Internet Protocol version 4 networks, broadcast addresses are special values in the host-identification part of an IP address. The all-ones value was established as the standard broadcast address for networks that support broadcast. This method of using the all-ones address was first proposed by R. Gurwitz and R. Hinden in 1982. ...

As you can see, when you use Netsh you need to specify what network properties you need to change. In the example above, we changed the network properties for "Local Area Connection" to use a static IP address of 192.168.10.42, a subnet mask of 255.255.255.0 and a default gateway of 192.168.1.1.

### **Change IP Address and DNS Servers using the Command Prompt**

Coming across unknown IP addresses. No matter how IP addresses come to your attention, sometimes you need to investigate them further. For example, your firewall might notify you about a denied connection from an IP address that you've never heard of and you want to figure out if it's truly a threat.

### **Trace an IP Address to Owner, Location, Website & More**

IP Networking Classes. Every host on a TCP/IP network needs to have a unique address, similar to you needing a unique address for your house. With this unique address, it is possible to send data from host to host.

This is a root cause analysis and solution for the issue causing duplicate ip addresses when servers booted with a static address and had an apipa address (169.254) Gratuitous Arp Issue:

### **[SOLVED] Static IP devices receiving 169 address after ...**

This IP address is structured like a regular one (it has four places for numbers) but it's really just a placeholder address or one that's used to describe that there isn't a normal address assigned. For example, instead of putting no IP address into the network area of a program, 0.0.0.0 can be used to mean anything from accept all IP addresses or block all IP addresses to the default route.

### **What It Means When You See the 0.0.0.0 IP Address**

An IP address is the most significant and important component in the networking phenomena that binds the World Wide Web together. The IP address is a numeric address assigned to every unique instance that is connected to any computer communication network using the TCP/IP communication protocols.
